

## **Professional Services**

As Primary Care Providers, we have intensive training in the simplest to the most complex medical disorders. We are committed to providing preventative, diagnostic, and clinical treatment of adult medical conditions. Services range from routine physical exams, medical clearance for surgery, diabetic education, treatment of common illness and injuries, to treating and/or coordinating the overall care of the patient. There is an emphasis on screening and disease prevention, weight management, and promoting health and wellness. These services are provided by our practice in both the inpatient and outpatient settings. Physicians are on staff at the Detroit Medical Center and admit primarily to Harper University Hospital. Examples of some of the outpatient procedures we offer are joint injections, nebulizer treatments, glucose, EKG, urine, and pregnancy testing. We also administer flu injections and some additional vaccinations.

In addition to the physicians, our practice has a medical support staff that is highly trained and committed to assisting in the delivery of exceptional patient care and service.
